

The 3M Difference

We invented window film . You invented places to use it.

Original Film

3M holds the original patent for window film, built upon several 3M core technologies.

Polyester film

3M is only window film manufacturer that actually produces its own polyester, including microlayer and color-stable technology film.

Adhesive

3M proprietary. Excellent optical clarity and a long lasting bond. User-friendly, too. Doesn't require special chemicals for application. Can be removed with simple techniques (when necessary).

Only film company that makes its own adhesive. In fact, few are as knowledgeable about adhesives as 3M.

UV Protection

Blocks up to 99% indefinitely. Keeps on protecting where other adhesives fail.

Protective Overcoat

Adhesive remains protected until film is applied on the window. Facilitates handling for a clean, crisp appearance. Allows film to be lifted, flushed with water, and placed on the window without distortion.

Fast-drying

Designed to be enjoyed while other films are still all wet.

Abrasion Resistant Coating

Patented, durable protection. Stands up to 'fine' steel wool and not-so-fine window washings. Ammonia-based window cleaners are acceptable, too!

Outstanding Warranty

100-Month Warranty or Platinum Optional, backed by a 16 Billion Dollar Company

3M Brand

The recognized quality name in the business!
